# Ryden Supplier Compliance Module

Welcome to the transformation in how organizations handle supplier oversight - **Ryden's Supplier Compliance Monitoring**.

By automating assessments, providing deep visibility, and ensuring alignment between your standards and your suppliers', Ryden saves companies millions in audit costs, reduces compliance risk, and eliminates manual bottlenecks. Don't wait till the next audit, or worse, till it affects your product delivery - become aware of issues as they start.

Key Features & Impact

Compliance Scores for All Suppliers

Instantly see the compliance health of every supplier. This eliminates the guesswork of traditional audits where only a handful of suppliers get audited. Continuous visibility reduces the need for expensive site visits and audits.

Facility and Requirement-Level Scoring

Drill into specific facilities or even down to individual regulatory requirements. This precision targeting saves countless hours during investigations and ensures you can pinpoint weaknesses before they escalate into violations.

Comprehensive Supplier Dashboard

A centralized dashboard transforms compliance from a reactive, document-heavy process into a proactive, data-driven operation. Executives gain immediate insights into global supply networks without waiting weeks for manual reports.

On-Demand Assessments

Request new compliance checks in real-time, eliminating the long cycles of scheduling audits. This agility means suppliers can be re-validated after changes, saving both sides significant costs in rework and downtime. Assessments can be custom, manufacturer specific, or even supplier specific.

Proactive Issue Tracking

Traditional compliance finds problems after they've already caused damage. Ryden's system flags issues at the earliest sign of non-compliance, preventing recalls, penalties, and lost revenue. Make sure your entire supply chain is in compliance, especially when a new or updated regulation occurs.

Push Your Processes to Suppliers

Extend your own internal procedures to your suppliers with a click. Instead of waiting for alignment, you can enforce your exact quality standards across the supply chain. This dramatically reduces discrepancies that typically surface during FDA or ISO audits.

Data Segregation

Suppliers never see your internal data, and you never see theirs. This strict separation protects confidentiality while still allowing transparency in scoring. It removes costly legal barriers to data sharing and accelerates collaboration.

Role Segregation

Assign specific facilities, requirements, and suppliers to individual users. This reduces the risk of error, protects sensitive data, and allows large organizations to scale compliance oversight without creating bottlenecks.

Supplier Request System

Request that a supplier becomes visible with a simple workflow. This removes the endless back-and-forth emails and contracts that slow down compliance onboarding. The approval process saves weeks of negotiation time per supplier.

Dual Approval Process

Every new assessment or supplier visibility request requires mutual approval. This protects relationships, ensures consent, and creates an auditable record – reducing disputes and saving overhead.

The Future of Supplier Compliance

The Ryden Supplier Module shifts compliance from a painful cost-center to a value-driver. By automating repetitive audit steps, reducing the time to detect risks, and cutting down on external audit fees, Ryden clients save up to 60% in compliance costs while accelerating their ability to bring safe, effective products to market.

Key Business Benefits

Massive Time Savings

Audit preparation that once took weeks is reduced to hours with real-time dashboards.

Reduced Audit Costs

Minimize reliance on auditors by running continuous digital compliance checks. Less travel, less audit time equals substantial savings.

Proactive Risk Management

Identify and resolve issues before they generate fines, recalls, or delays.

Supplier Alignment

Ensure every partner aligns to your standards, eliminating friction during regulatory inspections.
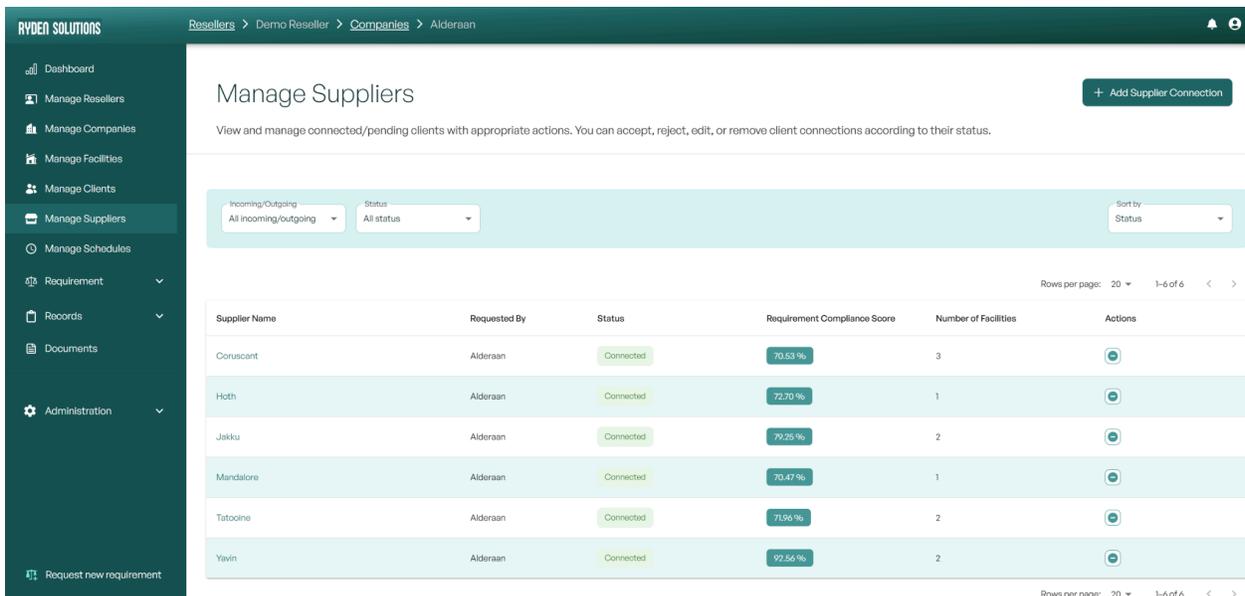

Scalability

Manage hundreds of suppliers globally without scaling your compliance staff. With an instant view to all your suppliers, you no longer have to wait for reports and audits to spot issues before they become a larger problem.

Data-Driven Decision Making

Compliance scores and dashboards provide executives with hard metrics, giving a complete view of all facilities and suppliers..

With Ryden, compliance stops being a reactive, document-heavy burden and becomes a continuous, data-driven advantage. The Supplier Module is built to change not just how you manage suppliers, but how you reduce risk.

SUPPLIER/CLIENT ONBOARDING PROCESS

Client Initiates
Click on Add Supplier from the Mange Suppliers page

Step 01

Approval Request
The supplier (if on the system) will receive an approval request.

Step 02

Approval Process
Once the supplier clicks Approve, they will then specify which facilities and regulations to share

Step 03

Client Notification
Once successful pairing has occured, the Client will recieve notifacation, and the supplier will show up in Manage Suppliers

Step 04

Supplier Monitor
The client will now be able to click into the supplier and see the full dashboard for that supplier.

Step 05
